

## SESD 271

### Vertical Coupling Plate (VCP) for ESD immunity tests

The Vertical Coupling Plate (VCP) is used in conjunction with ESD generators to simulate indirect discharges on metallic objects that are near a test object. The bleeder resistors contained in the ground wire of the VCP serve to prevent the applied charge from vanishing immediately after discharge of the ESD generator to the VCP, thereby increasing the effect of the ESD test.

#### Technical specifications

##### VCP

Dimensions: 50 x 50 cm  
Material: aluminum, 1.5mm thickness

##### Ground wire

Color: Black  
Length: 2 m  
Connections: Cable connectors Ø 6.2 mm  
Bleeder resistors: 2x 470 KΩ  
Outer diameter: approx. 3.5mm  
Voltage max: for ESD pulses according to IEC / EN 61000-4-2 up to 30 kV
